

Correction

Script Python

```
1 ALPHABET = 'ABCDEFGHIJKLMNPQRSTUVWXYZ'
2
3 def position_alphabet(lettre):
4     return ord(lettre) - ord('A')
5
6 def cesar(message, decalage):
7     resultat = ''
8     for c in message:
9         if 'A' <= c and c <= 'Z':
10             indice = (position_alphabet(c) + decalage) % 26
11             resultat = resultat + ALPHABET[indice]
12         else:
13             resultat = resultat + c
14     return resultat
```
